# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

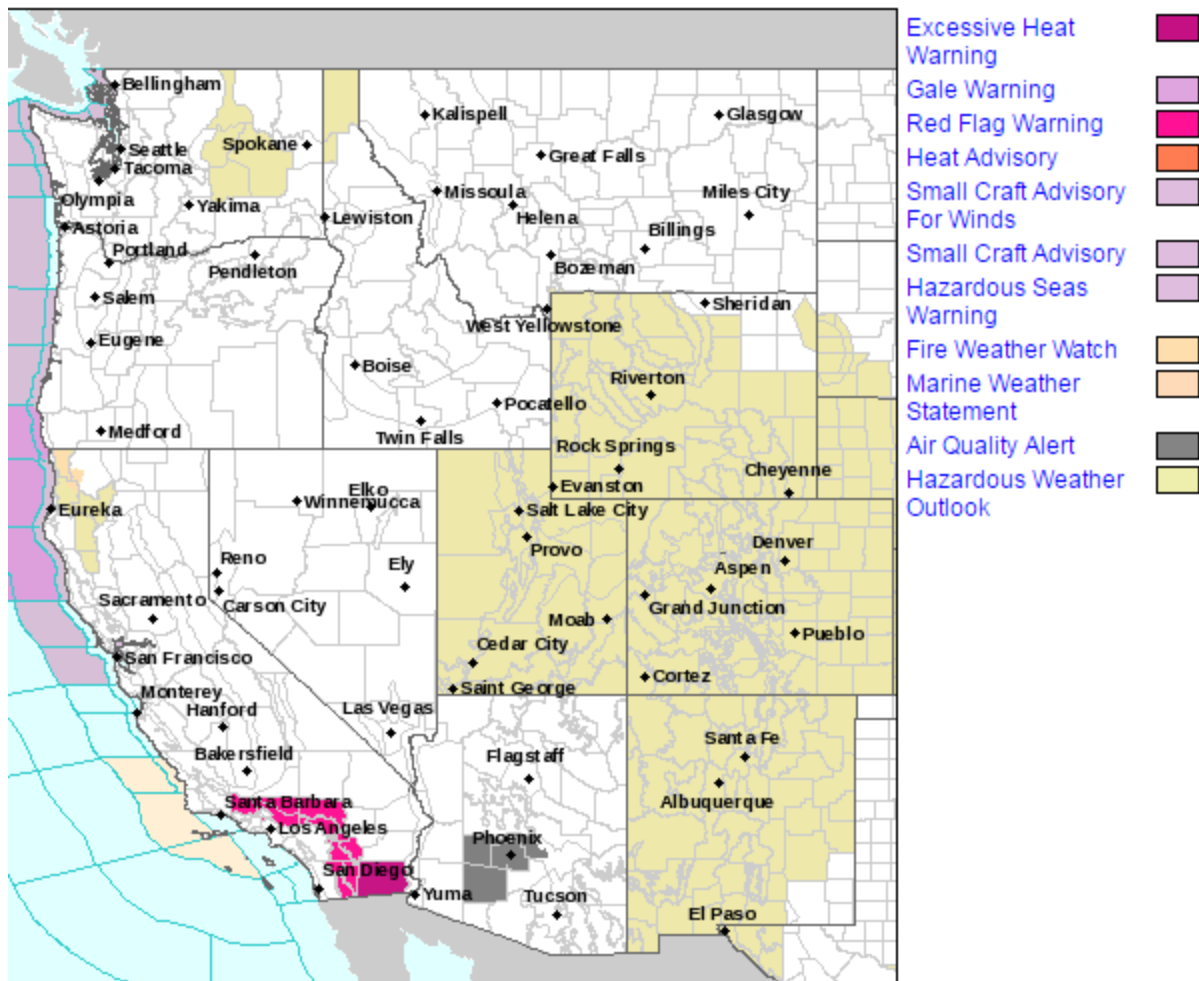

A series of small-scale Pacific low pressure troughs will continue to pass over the region this week, somewhat offsetting the heat produced by a larger-scale high pressure ridge over to our south. Temperatures will still be around 2-5 degrees above normal much of the week. A few cumulus buildups are possible over the northern mountains today, but thunderstorms are unlikely. Isolated thunderstorms are possible over the northern and eastern mountains Tuesday and Wednesday. Any storms that develop will be capable of producing brief rainfall, but dry strikes and new ignitions will also be possible. The low pressure troughs are allowing the marine layer to deepen to 1500-2000 ft. The cool moist marine air will move farther inland with stronger sea breeze winds in the Bay Area and into the Delta, but farther north the surface pressure pattern is producing offshore flow conditions and causing the mid and upper slopes of the mountains of far northwestern California to dry out. Northeast winds in far northwestern California will peak early Wednesday with gusts to near 30 mph. This pattern produces very dry conditions in far northwestern California and fire potential will be elevated for just the mid and upper slopes of the mountains in far northwestern California. A more organized low pressure center is expected to develop near Central California by Thursday and continue through the weekend. This low has the potential to draw in more moist unstable air and produce isolated to scattered showers and thunderstorms over a larger area each afternoon and evening. At this time confidence in the location and amount of thunderstorms is low due to model inconsistency, but it does not appear that it will reach High Risk criteria.

## **SOUTHERN CALIFORNIA**

Onshore flow along with a dry airmass will keep afternoon relative humidity (RH) very low in a few places the next two days. Expect desert-adjacent areas such as the north sides of the Angeles and San Bernardino National Forest and the east side of the Cleveland National Forest to see minimum RH readings fall into the 5-10% range this afternoon. Areas of west winds of 15-25 mph with occasional gusts to 40 mph will be possible in and near the Antelope Valley and the Banning Pass, primarily during the afternoon and evening hours. Elsewhere, local north winds of 10-15 mph will continue in Santa Barbara County early this morning. These winds should decrease by noon, but low RH can be expected above 1,000 feet in Santa Barbara County throughout the day. A weak low pressure area will bring a minor amount of cooling to the region today through Friday. Expect temperatures to trend downward a degree or two each day through the workweek, and by Friday, high temperatures in the valleys will be in the mid 90s. Minimum RH will continue to hover in the 8-12% each afternoon over most inland areas due to a lack of a marine layer. Winds should be lighter Thursday into the weekend with typical sea breezes of 15 mph each afternoon. Strong sunshine will promote enough instability to allow for some cumulus buildups across the mountains each afternoon through the week. One or two thunderstorms may occur in the Sierras Friday and Saturday, but no thunderstorms are expected elsewhere. Most long range models indicate a warming trend next week with temperatures climbing back to over 100 in the valleys by Sunday or Monday.

## Closed Cal OES LAW Missions

- **2016-LAW-25891, 8/14/16 at 1424 hours:** IERCC advised of a SPOT device activation, coordinates 37° 25' 2"N, 117° 57' 5"W, which plots to Inyo County near Oasis and 168 Rd. Per Inyo Sheriff dispatch, they are working a motorcycle crash in that area and dispatched deputies, CHP and fire to the scene. [Per Inyo Sheriff, this is confirmed as a motorcycle crash, registered owner of the device activated his SPOT device due to the crash.](#) **Mission Closed.**
- **2016-LAW-25883, 8/14/16 at 1110 hours:** IERCC reported an In Reach activation, coordinates 37° 29' 24" N, 118° 41' 24" W, plotting to the area east of Rock Creek Rd and South of Wheeler Crest in Inyo County. Per IERCC, registered owner has texted IERCC stating that he was injured with broken ribs. LDO notified Inyo County Sheriff who stated they had received several reports of a motorcycle crash in that area with three injured victims. Inyo Sheriff activated their Search & Rescue team for this incident. UPDATE: IERCC notified LDO that they received a cancellation from the In Reach device at 1215 hours. However, since there were multiple reporting parties in reference to a motorcycle crash with 3 victims, SAR teams are still in route. Per Inyo Sheriff, this incident is in Mono (on the border). Mono Sheriff and LDO coordinated multiple efforts to reach the registered owner of the device. After several hours, we were able to reach a friend of the registered owner who stated the RO had been involved in a motorcycle crash and was injured. They needed medical assistance and acknowledged they cancelled the In Reach activation accidentally. Per Mono Sheriff, there was no local or state air support available and requested the assistance of NAS Lemoore. Due to the time delay and need for immediate medical attention, LDO contacted AFRCC who accepted the mission 16M0563. UPDATE: [1525 hours, per Mono Sheriff, victim was extracted by NAS Lemoore and transported to an awaiting ambulance.](#) **Mission Closed.**
- **2016-LAW-25879, 8/14/16 at 1015 hours:** AFRCC advised of an ELT sounding in the Sacramento area. LDO coordinated with AFRCC who assigned the mission to Civil Air Patrol; [CAP located and silenced the signal/device at an airport in Sacramento County.](#) **Mission Closed.**
